📍 Iasi,RO

Skills

🔗 Programming Languages:

Python, TypeScript, JavaScript, Java, C, C++,
Verilog, MQL 5, Assembly

🔗 Frameworks & Libraries

Next.js, React, FastAPI, Tailwind
CSS, Microsoft Bot Framework,
sentence-transformers

🔗 Databases & Backend

Supabase, MongoDB, PostgreSQL, REST
APIs, boto3

🔗 AI & Automation

Groq API, LLaMA, OpenCV, LLM Integration,
Trading Automation, Gemini API, Workflow
Automation, Anthropic Claude, Amazon
Bedrock

🔗 DevOps & Tools

Docker, Git, GitHub, Vercel, Railway, Linux,
bash, AWS Lambda, AWS SAM, CloudWatch,
OAuth2, Azure AD, Microsoft Azure

🔗 Languages

Romanian — Native, English — B2

Achievements

Admitted to CTI (Computer Science &
IT) among the top applicants — 2024

Built 3+ production websites for real
clients — 2024–2026

Developed AI trading bot integrating
LLM APIs — 2026

- Computer Science Student at "Gheorghe Asachi" Technical University, Iasi, with hands-on experience building AI-powered apps and full-stack platforms. Skilled in LLM API integration, workflow automation, and deploying production systems using Python, Next.js, TypeScript, FastAPI, and Supabase. A fast learner who thrives in new environments and adapts quickly across domains — always delivering results.
- Actively seeking an AI Software Engineer role — passionate about pushing the boundaries of what AI can automate, optimize, and transform in the real world.

Education

Universitatea Tehnică "Gheorghe Asachi", Iasi Bachelor's in Progress
Computer Science and Information Technology
Iasi, Romania • Oct 2023 – Present

Projects

1.AI Chat Demo — Serverless Chatbot on AWS Bedrock

Designed and deployed a serverless AI chatbot on AWS using Lambda, API Gateway, and Amazon Bedrock (Claude Haiku via cross-region inference). Wrote the backend in Python with the boto3 SDK, handling CORS preflight logic, JSON request/response parsing, and IAM least-privilege role configuration. Defined the entire cloud infrastructure as code using AWS SAM (template.yaml) and managed the full deployment lifecycle with sam build / sam deploy. Integrated CloudWatch for observability and built a lightweight browser-based frontend consuming the REST API.

2.AI Trading Bot (MetaTrader 5)

Built a fully automated Forex trading bot with a custom RAG pipeline (ChromaDB + Claude AI & LLaMA), multi-timeframe technical analysis, and ATR-based risk management, executing trades autonomously across many instruments in MetaTrader 5.

3.Fără-Agenții — Real Estate Platform

No-agent real estate platform with Next.js 14, Supabase (Auth, Realtime, Storage), real-time chat, admin panel, LangChain RAG pipeline with pgvector, and an AI assistant panel powered by Claude API.

4. Sales Assistant Bot — Microsoft Teams

Microsoft Teams bot for sales agents that processes natural language queries against a product catalog using a three-level search engine (exact SKU → lexical scoring with RapidFuzz → LLM semantic verification) and multilingual vector embeddings (MiniLM-L12) for synonym matching. Includes voice input via Whisper large-v3, LLM intent parsing (Llama 3.1 / Groq API), smart clarification engine for ambiguous matches, and automated PDF offer generation — built with FastAPI, Bot Framework SDK, and Azure AD. multilingual vector embeddings (MiniLM-L12) for synonym matching. Includes voice input via Whisper large-v3, LLM intent parsing (Llama 3.1 / Groq API), smart clarification engine for ambiguous matches, and automated PDF offer generation — built with FastAPI, Bot Framework SDK, and Azure AD.

5.Emotion Detection Web App

Real-time facial emotion detection using Python (OpenCV, FER) with a FastAPI backend and Next.js 14 + TypeScript frontend. Containerized with Docker and deployed on Railway + Vercel with base64 frame processing and live emotion overlay.

6.CompactDrive.ro – Driving School Website

Production website for a driving school with a full admin panel, dynamic Supabase gallery, enrollment form with EmailJS, and complete local SEO (JSON-LD schema, sitemap.xml, Open Graph). Built with Next.js 14, TypeScript and Tailwind CSS.

7. Aeron Termosistem – Construction Company Website

Business presentation website with dynamic photo gallery, contact form with MongoDB persistence, and a password-protected admin panel for content management. Built with Next.js 15, TypeScript, MongoDB Atlas, Cloudinary for image storage, and deployed on Vercel.

8. Boerus Doner – Restaurant Website

Restaurant website with full menu, ordering system, promotions page, and smooth scroll animations. Built with Next.js, TypeScript, Supabase, and Tailwind CSS, deployed on Vercel.
