

Buzau Cosmin-Ionut

AI Software Engineer

✉ buzaucosmin6@gmail.com

☎ [+40 721 850 827](tel:+40721850827)

📍 Iași, RO

Skills

◆ Programming Languages:

Python, TypeScript, JavaScript, Java, C, C++, Verilog, MQL5, Assembly

◆ Frameworks & Libraries

Next.js, React, FastAPI, Flask, Tailwind CSS, LangChain, Microsoft Bot Framework, sentence-transformers

◆ Databases & Backend

Supabase, MongoDB, Mongoose, PostgreSQL, pgvector, REST APIs, boto3

◆ AI & Automation

Large Language Models, RAG Pipelines, OpenCV, Whisper, LLM Integration, Trading Automation, Workflow Automation, Anthropic Claude, Amazon Bedrock

◆ DevOps & Tools

Docker, Git, GitHub, Vercel, Railway, Linux, AWS Lambda, AWS SAM, CloudWatch, OAuth2, Azure AD

◆ Integrations & Services

Cloudinary, EmailJS, Resend, Leaflet, ReportLab, ngrok

◆ Languages

Romanian — Native, English — B2

Achievements

Admitted to CTI (Computer Science & IT) among the top applicants — 2024

Built 3+ production websites for real clients — 2024–2026

Developed AI trading bot integrating LLM APIs — 2026

- Computer Science Student at "Gheorghe Asachi" Technical University, Iași, with hands-on experience building AI-powered apps and full-stack platforms. Skilled in LLM integration, RAG pipelines, workflow automation, and deploying production systems using Python, Next.js, TypeScript, FastAPI, and Supabase. A fast learner who thrives in new environments and adapts quickly across domains — always delivering results.
- Actively seeking a Software Engineer / AI Engineer role — passionate about pushing the boundaries of what AI can automate, optimize, and transform in the real world.

Profiles

Experience

Freelance AI Software Engineer — Self-Employed

Jan 2025 – Present

Iași · Remote

Designed and built production websites end-to-end for real clients, from concept to deployment:

Aeron Termosistem (business site turning visitors into leads via a photo gallery and a persisted contact form), **Compact Drive** (driving school platform where the owner manages the gallery and promotions directly, no developer needed), and **Boeru's Doner** (5-location restaurant platform with a full digital menu and per-location ordering). Delivered clean UI, robust backend architecture, and ongoing maintenance for each.

Education

Universitatea Tehnică "Gheorghe Asachi", Iași

Bachelor's in Progress

Computer Science and Information Technology

Iași, România · Oct 2023 – Present

Projects

1. AI Chat Demo — Serverless Chatbot on AWS Bedrock

Two hands-on AWS builds. First, a serverless chatbot API on Lambda, API Gateway and Amazon Bedrock (Claude): the Python backend (boto3) handles CORS and JSON request/response parsing, the entire stack is defined as infrastructure-as-code with AWS SAM, the IAM role follows least-privilege, and CloudWatch is wired in for observability. Second, a full Next.js website connected directly to Bedrock — a real-time chat interface that streams the model's answer token-by-token to the browser and renders it as formatted Markdown with syntax-highlighted code blocks, for an instant, ChatGPT-like feel.

2. AI Trading Bot (MetaTrader 5)

Autonomous Forex trading bot that scans forex pairs, indices and crypto every 30 seconds and trades 24/7 without supervision. Market data flows through a Python Flask REST API to an AI-driven decision engine that decides BUY/SELL/HOLD/CLOSE, backed by a retrieval-based memory pipeline that recalls similar past market situations for sharper decisions over time. Risk is managed dynamically: position size scales with account equity and ATR volatility, trailing stop-loss and anti-martingale sizing limit downside, and an economic news filter automatically blocks trading around high-impact events.

3. Fără Agenții — Real Estate Platform

Commission-free real estate marketplace connecting buyers and renters directly with property owners across Iași. Owners and tenants message each other live through Supabase Realtime, manage their own listings from a personal dashboard, and can favorite or track statistics on properties. An AI assistant answers questions about the catalog using a LangChain RAG pipeline backed by Supabase pgvector, with a role-gated admin panel for moderation and Row Level Security enforced on every table.

4. Sales Assistant Bot — Microsoft Teams

Conversational sales bot for Microsoft Teams and web that answers availability, pricing and offer requests by voice or text. Built from scratch: a three-level search engine (exact SKU → weighted fuzzy scoring → LLM verification) backed by multilingual semantic embeddings, so typos, synonyms and translated product names all resolve correctly. When results are ambiguous, it detects the actual axis of confusion — category, size, or variant — and asks the one question that fixes it. Voice queries run through Whisper large-v3, confirmed offers generate as PDFs in memory, and the bot plugs natively into Microsoft 365 via Azure AD.

5. Emotion Detection Web App

Real-time facial emotion detection app that captures webcam frames in the browser, encodes them as base64 JPEGs, and streams them to a Python backend. The backend classifies 7 expressions (Happy, Sad, Angry, Fearful, Surprised, Disgusted, Neutral) using OpenCV and FER (TensorFlow), with results drawn back onto the video feed as bounding boxes and per-emotion probability bars. Backend containerized with Docker on Railway; frontend (Next.js/TypeScript) on Vercel.
